$$\Delta E = m_o c \Delta T$$

$$2265 \frac{kJ}{kg} \times \frac{1\,kg}{1000\,g} \times \frac{1000\,J}{1\,kJ} = 2265 \frac{J}{g}$$

$$\frac{\Delta E}{\Delta t} = m_o c \frac{\Delta T}{\Delta t}$$

$$= (220\,g)\left(4.184 \frac{J}{g \cdot {}^\circ C}\right)\left(0.0849 \frac{{}^\circ C}{s}\right)$$

$$= 78.15 \frac{J}{s}$$

$$|\Delta E| = \Delta m L$$

$$\frac{\Delta E}{\Delta t} = \left|\frac{\Delta m}{\Delta t}\right| L \Rightarrow L = \frac{\Delta E/\Delta t}{\Delta m/\Delta t} = \frac{78.15\, J/s}{0.04252\, g/s} = 1840 \frac{J}{g}$$

$\cancel{\Delta E}$

$$\frac{E_{in}}{\Delta t} = \frac{m\, c\, \Delta T}{\Delta t} + \frac{\Delta m\, L}{\Delta t}$$

$$P_{IN} = m\, c \left(\frac{\Delta T}{\Delta t}\right) + \left(\frac{\Delta m}{\Delta t}\right)_1 L$$

$$P_{IN} = \left(\frac{\Delta m}{\Delta t}\right)_2 L$$

$$m c \left(\frac{\Delta T}{\Delta t}\right) + \left(\frac{\Delta m}{\Delta t}\right)_1 L = \left(\frac{\Delta m}{\Delta t}\right)_2 L$$

$$\frac{m c \frac{\Delta T}{\Delta t}}{\left(\frac{\Delta m}{\Delta t}\right)_2 - \left(\frac{\Delta m}{\Delta t}\right)_1} = L$$
